Summary

I am Muhammad Irvan Hakim, an web developer with 2 years experience in professional and self-employed in non-profit organizations. In work, i often use technology stack as such as JavaScript, PHP, Laravel, and relational or non-relational database management. During my career, i have successfully developed web applications efficient and works well.

I have a good understanding of software design principles like architecture scalable and maintainable. In addition, I am known as a good learner and ready to continue honing my skills in this ever-evolving industry. I have good adaptability and able to work in a team or independently.

I believe that with a combination of experience, technical expertise, and high learning enthusiasm, I can make a positive contribution in web development.
